

# Product Manager – Hardware (m/f/d)

in Munich, Germany - Full Time

We are hiring a Product Manager who will join our Hardware team in Munich (Freiham). This role has a focus on product compliance — while also taking on other product management responsibilities.

We are intentionally open on seniority.

This could be the next step after your first experience in product management / hardware development / regulatory compliance — or the role where you grow into all of this.

## Your Responsibilities

- Research and understand markets, users, and competitors to inform product decisions.
- Define product requirements in close collaboration with engineering.
- Lead and coordinate product compliance topics for our hardware portfolio (certifications, documentation, standards, legal requirements).
- Help us to continuously improve product quality and sustainability.
- Act as a point of contact for product information and compliance-related requests from customers, partners, and authorities.

## What you bring

- Master's degree in industrial engineering, mechanical engineering, business & engineering, or similar — but other paths are also welcome.
- Analytical mindset and an eye for detail.
- Genuine interest in hardware products.
- First exposure to product management or compliance is nice to have, not mandatory.
- Ability to read and digest technical and legal language.
- Excellent communication skills in English (written + spoken).
- Team-oriented, reliable, pragmatic work style.

## What we offers

- 30 days of vacation.
- Relocation assistance to Munich (if required).
- Modern office, free coffee & fruit.
- Short decision paths and the ability to shape real hardware end-to-end.

If this sounds like a place where you could grow — we'd love to hear from you.

## 3Dconnexion

3Dconnexion® is the leading provider of award-winning devices for 3D design and visualization professionals.

Our mission is to help people produce better designs, faster and more comfortably. 3Dconnexion products provide a more intuitive and natural way to interact with computer-generated 3D content.
